NFORMATION REPORT INFORMATION REPOR

GENERAL INFORMATION:

NOVOROSSIYSK

- A- Three small buildings were observed to the left of the height here.
- the buildings to be guardhouses. Observed two villages. One of them was at the 25X1 foot of this height and in the interior and the other was located by the shore. A factory and square, iron posts were observed which had electrical cables at this village. A road for vehicles was observed which led to the port.
- B- Shallow area where two look-out posts were located.
- F Pier located here.
- △ Location where three lock-out alignment posts are located to show the way to the port and to avoid the shallow waters. They flash a green light during the night.
- E- An old cement factory in operation. An asphalt road which leads to the port passes in front of the factory. Underground cables were observed beyond the cement factory which lead to the Naval Station. (H).
- 2- Another cement factory. Approximately 800 homes are located between the cement factories

I- ORGANIZATION:

- H- Naval Station factory where a large crane is located. (See sketch in the original.)
- G Cement leading pier. One ship can dock on each side of it. There is a cement warehouse in the center of it. The ships are loaded by means of small mobile cranes because the three on the northern side and the two on the southern side are destroyed.
 - I- Port area where small fishing craft anchor.
 - K- Coal and ores pier. 12 cranes are located at this pier. There is also a warehouse located on this pier in front of which a railroad track passes.
- A Lecation where a third cement factory is lecated. Evidently, it pertains to the Sanitized Copy Approved for Release 2010/06/02: CIA-RDP80T00246A037000410001-5

second factory which has been reported as a third due to the change of location.
M- A destroyed pier which is being repaired.
N- SILO pier. The main silos are located in the interior. Three suction pipes were
observed at this pier which are located on the western side. Only one ship can load at a
time. The three suction pipes provide 3000 tons of grain daily.
- Petroleum pier where one ship can dock on each side. 20-25000 tons of petroleum
isloaded on both sides daily.
NAVIGATION:
Three small tankers belonging to the Soviet Fleet were observed at the southeastern break-
water (in the interior). They were providing the warships with petroleum.
water (in the interior). They were providing the warships with petroleum.
Together where a devided to Tourist A 2000 to the state of the state o
1- Location where a drydock is located. A 2000 ton ship was being built on it. The dry-
dock had two cranes. A crane which was under repair and a Reavy type derrick were observed
near the drydock and the Naval area.
2- Eight fishing crafts (tartans) located here. Near the destroyed pier, there was another
floating crane which had a propulsion machine and two propellors. There was an automatic
dredger at work in this area. It looked like a ship. The dredger had a suction pipe to
take out mud which was transferred to the shore by small navigable means. ("klapi")
3- Area where a small drydock was observed which is used for drydocking small craft.
Small ships and fishing craft were observed near this drydcck.
WARSHIPS:
12 minesweepers were observed between the petroleum and silo piers. Two warships were ob-
served outside the harbor as well as an "ELL" type warship but smaller.
MERCHANT SHIPS: Location where the following were observed:a) 2000 ton freighter; a dis-

Three destroyers and a 9500-ton cruiser

were observed

near Novorossysk Harbor

The decksef the cruisgntappearedocontinuous from the storn except for a slight elevation at the prow. The prow had two turrets withe three guns, one in succession to each other. It had two smokestacks. One was exactly in back of the bridge and the other was on the stern side of the stern mast. Both of the smokestacks on top have an inclination towards the stern. The distance between the smokestacks was great and there were torpedo launchers there.

The cruiser had a catapult at the stern upon which was an airplane without wings.

They may have been folded. No propellor was observed.

The above mentioned warship had two bridges. The one at the stern was on the prow a side of the stern mast. Many anti-aircraft were observed on both bridges. There were no side guns. At least four RADAR antennae were observed. That is, one each on each 25X1 bridge and one each on each of the masts. They were like the NEPTUNE and BIRD types.

	_	
	Its prow was vertical, it had no forecastle. The deck was	
	ow. It had a SKORY type stern. It had two smokestacks.	
It had 4 twin-gun turret	ts, two at the stem and two at the prow, one atop each other.]	Ιt
also had torpedo launche	ers. Their location and number were not designated. It also had	ì
a RADAR		,

CABOTAGE HARBOR.	
Mo.3 There is a pier on the eastern side which is over 800 feet long. Only about 300 feet	
is being used starting from the end molehe make rest of the pier has been destroyed.	
An old electrically-operated crane was observed on the used section of the pier. It	
moves on iron wheels, has a hoisting power of over 5 tons, a cable, and a winding drum.	
Concrete blocks were being placed at the destroyed section of the pier and an air-hammer was	
harmering posts.	
Above mentioned work was not intensive. Only about 15 workers were occupied there and	
one truck which carried dirt.	
Six cranes were observed on the western side of the above mentioned pier. (There may	
be more.) The cranes were electrically operated and had a hoisting power of about 10 tons.	
A railroad track was observed on this side. There were railroad cars on this track.	
They were full of coal, (60-62 tons each), The bases of the cars was made of iron and the	
bulwarks was wooden.	
There is an area on this pier which has iron of various diameters. There were also	
crates having a dimension of about 6xx. 1 x 1.5 Contents of the crates in unknown.

jackets. The patches were green. There were two or three rows of silver around it. Their overcoat was khaki. They had nothing on their coats. They were new boots, and a fur, cossack type hap. The caps had a star and the hammer and sickle on them.

The two military men who boarded the ship had two patches on the collection of their

PORT ORGANIZATION

Ten Soviet made cranes with plates on them were observed at the interior of MEN HARBOR. They were 12-ton electrically operated and they had a winding drum and a cable.

The NEW MOLE area of this pier is destroyed and they have paved it with wood in order to facilitate the loading and unloading of the ships which dock there. They are filling the destroyed area with dirt.

Five 10-ton cranes were observed at the NEW MOLE. There was a double track railway there. One of them passes underneath the cranes. The head of the above mentioned pier is destroyed. No repair work was going on.

a) MERCHANT SHIPS

Four passenger ships were observed in the harbor. They were ald, not freshly painted, and they appeared to be disarmed. One of them was 16000 tons and the other two were 8000 25X1 tons.

They came from the direction of FONTANA. They departed an hour later and took the same di-

The above mentioned warships had a slightly inclined prow and the flat of the stern

was slightly inclined towards the prow. They had a forecastle which took up 1/3 of the length

which could be used for surface and air targets. The guns could be raised upwards.

Sanitized Copy Approved for Release 2010/06/02: CIA-RDP80T00246A037000410001-5

of the ship. They had one tri-pod mast and two smokestacks. The prow had two twin 7" guns

The stern had two successive turrets. Each turret had two guns similar to the above

The prov guns were two meters long and the

ships passing through , between the two breakwaters.

WARSHIPS

rection which they came from.

mentioned but, their barrels were thinner.

Sanitized Copy Approved for	Release 2010/06/02 :	: CIA-RDP80T00246A037000410001-5

They had no anti-aircraft armaments except for two guns with shields, one each on either side of the bridge of the forecastle. A torpedo launcher was observed at the internal emplacement of the prow turret, on the left side which could be observed. The radar and the other accessories were similar to the SKORY CLASS. (See page three in handbook "YARD RAKE".) 25X1 The above leaving the harbor. 25X1

mentioned submarine's outline was similar to the of the Z CLASS, except for the bridge which was similar to that of the Z CLASS but in smaller dimensions.

The gun had no stay. A parallelogram was observed at a distance of about 3 meters away from the turret and towards the prow. The parallelogram was about 1.30 meters long and 60 cms. high and it took up almost the entire width of the deck. This looked like the W CLASS seen on page 25 in the handbook as a Marker Buoy. The submarine was painted dark grey.

The submarine did not have a length longer than 30 meters. One mast was on top of the turret and there was tube, like a periscope, in the middle. Its height was about 2 meters and it was above the turret.

There were no railings except around the turret. Other warships were not observed on either trip either going or coming.

SECRET

ship and	hored at the SILO pier	length is	about 400 meters.

7At anchor, in positions (1) and (2);	
- Six destroyers, probably of the KOLA class, for which	25X
the following specifications:	
- Funnels - two, slightly slanting, with smoke baffle, elliptical.	
- Masts - one, between the bridge and the first smokestack; height	
above the deck, about 10 meters.	
- Bow - raked, inclined; height above the water line, about 4 meters.	
- Stern - square, slightly inclined; height above the water line,	25)

about 2.50 meters.

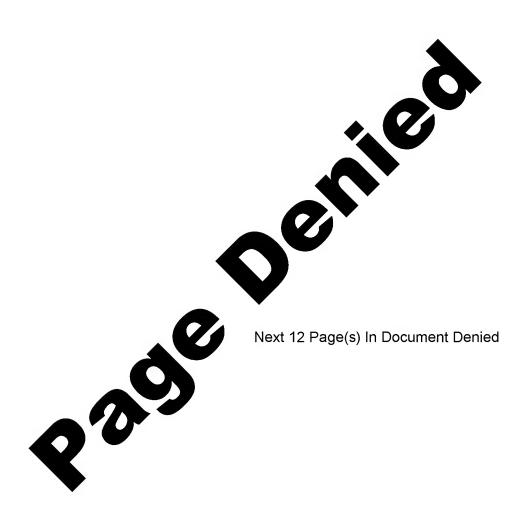

- Over-all length: about 80 meters.

-1-

- Superstructure - forecastle, bridge, shelter deck for machinery.

, خه ,	Sanitized Copy Approved for Release 2010/06/02 : CIA-RDP80T00246A037000410001-5	
	- Armament - twin-mounted guns, at the bow, superimposed,	05)/4
	partially (shielded,) 120-millimeter; twin-mounted guns, astern,	25X1
	superimposed, partially (shielded), 120-millimeter; four large-	
	caliber machine-gun units, two twin-mounted and two single, all	
	arranged on a shelter deck built between the two funnels; two torpedo	
	tubes on the deck, amidships, under the bridge; depth-charge apparatus	
	at the extreme stern.	
	- special equipment; two radar sets, one on the bridge and	
	one at the top of the mast; radio direction finder; radio (2 or 3	
	antennas observed).	
	- hull and superstructure painted dark gray.	
	One light cruiser, described as follows moored at	25X1
	position (3):	
	- bow: raked; height above water line, about 5 meters	
	- stern: square; height above water line, about 4 meters	
	- hull: with only one deck	
	- over-all length: about 130 meters	
	- masts: two; height above the deck about 15 meters	
	- bridge: height above the deck, about 8 meters	
	- funnels: two, slanting, with smoke baffle, between the two masts	
	- armament: two twin-mounted 152-mm guns in the bow; two twin-	
	mounted 152-mm guns aft; eight partially shielded heavy machine guns	
	on a shelter deck between the two funnels.	
	- deck: both fore and aft, the deck appeared to be clear of any	
	obstruction, as the entire superstructure and the four gun turrets	
	appeared to form a unit	
	- special equipment: two radar sets; radio direction finder's radio	
	(several antennas observed)	
	The following were observed in the harbor, moored at position (4):	

Sanitized Copy Approved for Release 2010/06/02 : CIA-RDP80T00246A037000410001-5	
**	25X
- 3 ferry boats, with collapsible bow, of the motor landing	
craft type, with two decks;	
- 4 minesweepers, moored at position (5);	
=1.2 or 3 tugboats	
Merchant Vessels Observed	
Because of a storm, a Soviet steamer had run aground and then been	
towed into the harbor by two 1,500-hp tug boats. The ship was at position	ח
(6).	
Miscellaneous Observations Concerning the Black Sea	
There is a search light, with a range of 12-15 miles, about	
every five miles between Cape Aitodor and Point Doob.	
During the night of 19-20 March 1957, a Soviet motor patrol boat,	
with lights out, approached , about 10 miles from Point (10).	25)

NAVAL

Port Information and Naval Activity at NOVOROSSISK

25X1

1. The following information was obtained in the course of a visit to NOVOROSSISK

- 2. Foreign merchant vessels are allowed to proceed into port unescorted and are not boarded until arrival at the "Foreign Vessels" anchorage 44°42.5'N., 37°49.5'E. Admiralty Chart No. 162.
- At the anchorage, the pilot only is picked up, who then takes the ship into port and berths her alongside, without the aid of tugs. Tugs did not appear to be used in berthing any ships, including tankers up to 12,000 tons. The customs go aboard after the ship has berthed but they do not search her.
- 4. The light at $44^{\circ}39.7$ 'N., $37^{\circ}49.7$ 'E. is not in the position as shown on the chart but is at approximately $44^{\circ}39.6$ 'N., $37^{\circ}49.9$ 'E.
- 5. Wreckage of a fishing boat is visible at 44°39.8'N., 37°49.6'E.
- 6. A line of piles extends for approximately 500 feet from the point at 44°40.5'N., 37°48.6'E. on an estimated bearing of 130°. It would seem that they are the remains of a derelict jetty.
- 7. On 19th November a cruiser arrived in the Bay and anchored outside the harbour at approximately 44°43'N.,

 37°49'E., where she remained until her departure the next day.
- 8. SECRET Adverse weather conditions prevented detailed

- 2 -	25 X 1
observations but, from her general appearance, she appeared	
to be of old design. It was considered she bore some	
resemblance to the CHAPAEV Class, but see Appendi FCRET	
FILMSTAR.	
9. There was no evidence to show that a degaussing	25X1
station existed south of the Western Mole.	20/(1
10. A green light is sited at the end of the Coasting	
Mole, which has now been repaired. It was not, however,	
noticed if the south easterly projection had been restored.	
11. Two identical destroyers were tied together stern	•
on to the Timber Wharf, with bows anchored in midstream.	
12. One of these vessels slipped her moorings at	
and left harbour	25 X 1
at high speed, which she obtained in an extremely short space	
of time. Her engines were making a considerable noise.	
	25 X 1
14. On general appearance, these destroyers resembled	
the SKORY Class, but differed in that their mainmast was	
abaft the after funnel and the turrets mounted single, instead	
of twin, guns. See Appendix "A" for FILMSTAR.	
15. Their ensign had a white background with a thin	
red edging of equal thickness on upper and lower edges,	
with a red hammer and sickle in the top corner nearest the	
staff and a red star in the diagonally opposite corner.	
16. There were numerous small but unarmed naval vessels	
in the harbour which were also wearing this ensign. Some	
of these were engaged in clearing operations on the remains	
of Wharf No. 4.	
17. A signal station on the end of Wharf No. 3 was	
manned by naval personnel. It was in constant communication	

with the cruiser outside and with small naval craft in the harbour, all of which carried signallers armed with Aldis lamps. When signalling to the cruiser, it used the international code for both figures and letters, but the message could not be understood. It did not communicate with merchant vessels.

- 18. A tug was observed under repair alongside Wharf
 No. 3 at the end nearest the shore on the west side. A small
 naval vessel with salvage on her decks from Wharf No. 4 was
 berthed nearby.
- 19. Two old destroyers in red lead were berthed alongside the retaining wall immediately north of the Cement Works Jetty at 44°43.85'N., 37°48.45'E.
- 20. They had two funnels, one thicker than the other, were approximately 300 feet in length and carried single masts. No other details were observed.

CRUISER

- Two short funnels. The forward funnel was set abo.
 the heavy forward upperworks.
- I Not visible.
- L 600 feet plus.
- M Two masts.
- She was notable for her broad beam and heavy upperworks forward. Her bridgework was mparticularly heavy and was surmounted by a large director with a horizontal projection (rangefinder?) on either side.

T }
A } Not visible due to weather conditions.
R }

DESTROYERS

- F Two short and squat funnels with a slightly raked cowling.
- I 4? and 4?.
- L Approximately 400 feet.
- M A tripod foremast and a pole mainmast, the latter abaft the after funnel.
- S Break level with the bridge. Cut-away stern near the water-level the exposed section of the hull was not submerged when travelling at high speed, although one would have expected it.
- Turrets with single guns, barrel length 8-9 feet, in A, X and Y positions.
- A Two single 37 mm. type guns, without flash eliminators, on each side of the bridge, one mounted on the fo'c'sle 25X1 deck and the other at the top of the bridge capture.
- R Not observed
